

Warning

E-bikes and Electric scooters

E-bikes and Electric scooters use large lithium-ion batteries which can present a risk or serious fire or explosion in certain circumstances.

Follow these 5 steps when purchasing, charging and storing your electric scooter or e-bike to reduce fire risks:

- 1** Do your research: Only buy an e-bike, electric scooter, charger or battery from a known seller and check product reviews.
- 2** Read and follow the manufacturer's instructions for charging and using e-bikes and electric scooters.
- 3** Not all e-bikes and e-scooter batteries and chargers are compatible or safe when used together. Check and only use the manufacturers recommended battery and charger.
- 4** Always charge in a safe place without blocking exits, and always unplug your charger when you have finished charging. Fit smoke alarms in the area where you charge your batteries at home.
- 5** Never attempt to modify or tamper with your battery.

WE ARE SAFER TOGETHER

Fire safety is up to everyone. Play your part.
